

## Transcript for Retrospect Video 1

Steven J. Corbett

*Male:* Maybe I'll come see you soon. I haven't decided yet. You've been very mean today. Ann and Sasha, both of you, you talked about how in a science major and how I can't understand scientific analysis but I very clearly understand scientific analysis and that's why I'm frustrated with John's paper because he doesn't give enough scientific analysis and he provides so much evidence in his charts that Sasha mentioned that I can't even begin to explain to you how much he's going to need to – why did he choose those demographics? Why did he choose his particular t-test? What is a t-test? It is important because not everyone does know what a t-test is. You talk to any freshman who hasn't taken statistics they don't know what it is. So it is important. It is very important to describe those things.

So when you tackle four charts all at once that's an immense amount of evidence with not nearly enough analysis that he provides. So that's why I'm frustrated and that's why I didn't choose this paper because as a science major this is appalling and if I turn this in in one of my science classes I would get an F because I didn't do enough scientific analysis. So to say that is very offensive. Dan, *The Dead Zone* movie, that came out in 1983. I believe most of us in this room were born like ten years after that. So obviously that just proves Alex's point that you're before the tablet era. Okay? So don't try to use older people material. Is that clear enough for you as well? Okay. Just making sure.
